

Rhino Linings®

CASE STUDY

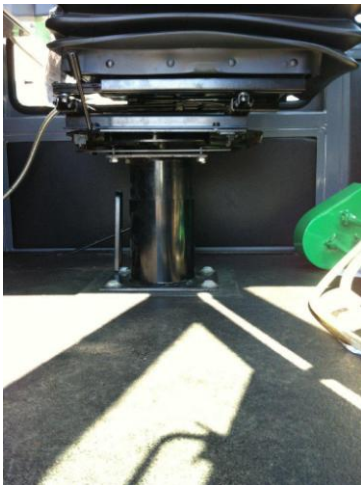

Category: Durability and Corrosion Protection
Project: Grade Control Drill Rig – Model GC600
Applicator: Rhino Linings Perth
Rhino Products: Rhino TUFF STUFF®

Drill rigs are used within the mining and gas and oil industry to penetrate the earth's surface to create boreholes, even shafts, in the ground for water wells, oil wells and natural gas extraction.

Australian company Drill Rigs Australia (DRA) based in Canning Vale, WA, manufacture and service drill rigs, drilling support equipment and ancillary equipment. As part of their manufacturing process, Drill Rigs Australia sourced and specified Rhino TUFF STUFF® as their preferred flooring for drill rigs due to the products durability, corrosion protection and hardwearing nature.

Drill Rigs Australia has found that cab floors are now easier to clean. Further, unlike cabs where rubber flooring is used, there is no issue with smell, build-up of dirt under the flooring or trip hazards from rubber mats swelling.

Beside the benefits of corrosion protection and durability, the application of Rhino TUFF STUFF® spray applied polyurethane has made for a more comfortable and safer work environment for the operator.
