

Rhino Linings®

CASE STUDY

Category: Durability and Corrosion
Project: Blast Hole Drill Model -
DRA 330 Rockcommander
Applicator: Rhino Linings Perth
Rhino Products: Rhino TUFF STUFF®

Western Australian based Drill Rigs Australia, manufacturer and maintenance provider for drill rigs, along with Ausdrill Limited developed this DRA 330 Rockcommander with the intention of carrying out contour work in the iron ore mines of the Pilbara and surrounding areas.

As part of their manufacturing process, Drill Rigs Australia sourced and specified Rhino TUFF STUFF® as their preferred flooring for DRA 330 Rockcommander due to the products durability, corrosion protection and hardwearing nature.

Drill Rigs Australia has found that cab floors are now easier to clean. Further, unlike cabs where rubber flooring is used, there is no issue with smell, build-up of dirt under the flooring or trip hazards from rubber mats swelling.

Beside the benefits of corrosion protection and durability, the application of Rhino TUFF STUFF® spray applied polyurethane has made for a more comfortable and safer work environment for the operator.
